

Journal of Human Biology and Clinical Medicine

Article review

Title:

(the reviewer puts a mark "+" in the corresponding column of the table)

Analysis of the article by characteristics	Yes	No	Notes
The title corresponds to the content of the article, is interesting to the scientific audience and does not require correction.			
The article is original and makes a significant contribution to the existing literature in the field.			
The abstract meets the requirements of the journal (200-300 words) and covers the main study results.			
Keywords (4-7 words or phrases) are not duplicated in the title and correspond to the content of the article.			
The introduction reflects the current state of the problem at the world level. The analysis of recent studies and publications contains references to scientific articles over the past 35 years.			
The purpose of the study is formulated correctly, corresponds to the content and title.			
The section "Materials and Methods" is formulated correctly, reflects the content and line of research; the methods used for data processing are described.			
The section "Results and Discussion" is sufficiently substantiated, correctly presented from the standpoint of methodology, has novelty and practical value. The article contains references to articles of a similar line of research conducted in other countries.			
Figures, diagrams, and formulas are made with high quality, in accordance with the requirements of the journal.			
Tables are placed after their mention in the text, numbered with Arabic numerals (book orientation). All abbreviations are deciphered. In tables, words are written completely with the correct use of hyphens. The notes to the tables provide all the data necessary to understand the content.			
The article contains the optimal amount of graphic material for this type of research.			
The conclusions fully and specifically reflect the research results, correspond to the goals and title of the article, and are not duplicated verbatim in the abstract.			
The text of the article does not contain spelling, grammatical, and mechanical errors.			
All sources used are cited in the text and arranged in accordance with the requirements of the journal. References have been translated correctly into English.			
The list of references is presented in English and is drawn up in accordance with the international bibliographic standards Vancouver Style. 30% of the references is represented by sources that are published in international scientific journals.			
Final Reviewer Assessment			
<i>The article is recommended for publication in the Journal of Human Biology and Clinical Medicine without comments.</i>			
<i>The article can be published in the Journal of Human Biology and Clinical Medicine after minor corrections without re-submission to the reviewer of the article.</i>
